PROFESSIONAL SUMMARY

Senior Frontend Developer with 5+ years of experience building, scaling and optimizing production web applications with JavaScript, TypeScript, React and Next.js. Led a zero-downtime Next.js 13 → 16 migration on a high-traffic automotive e-commerce platform, raising the Lighthouse performance score from ~20 to 90+, and built a 1,000+ test suite (Jest, Vitest, Playwright, Cypress) integrated into CI/CD. Hands-on with observability and product analytics (Sentry, New Relic, PostHog), design systems (Storybook) and micro-frontend architecture. Strong foundation in algorithms and data structures backed by a Mathematics degree; experienced in Agile/Scrum teams, technical SEO and Core Web Vitals optimization.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React, Next.js (v13-16, App Router, RSC, Turbopack), React Native, Svelte, Node.js, Bun

Architecture: Micro Frontends, Component-Driven Development, Reusable Component Architecture, Custom React Hooks, Server-Side Rendering (SSR/SSG/ISR), Monorepo, Design Systems

State & Data: Redux, Redux Toolkit, RTK Query, Zustand, React Query (TanStack), SWR, GraphQL, Apollo, REST API, Socket.io, Axios, React Router

Maps & Geospatial: Mapbox GL, Google Maps API, Leaflet — map-based UIs, marker clustering, geospatial filtering

Forms & Validation: Zod, Yup, schema-based validation, complex multi-step forms

Styling & UI: Tailwind CSS, Sass/SCSS, Material UI (MUI), Chakra UI, Ant Design, Bootstrap, Storybook, Responsive Design, UI/UX Implementation, Figma-to-Code

Testing & Quality: Jest, Vitest, React Testing Library, Playwright, Cypress, Unit / Integration / E2E Testing, TDD, Code Review, Clean Code, SOLID, OOP

Performance & SEO: Core Web Vitals (LCP, CLS, INP), Lighthouse, Bundle Analysis & Code Splitting, Lazy Loading, Caching, Technical SEO, Structured Data (JSON-LD)

DevOps & Monitoring: Vercel, AWS, CI/CD (GitHub Actions), Sentry, New Relic, PostHog, Git, GitHub

Methods & Tools: Agile, Scrum, Kanban, Jira, Figma, VS Code

WORK EXPERIENCE

Senior Frontend Developer — Nuevo Softwarehouse (Otokoç 2.El)

June 2024 – Present | Remote

- Own the frontend of **Otokoç 2.El**, a high-traffic second-hand vehicle e-commerce platform (Koç Group / Otokoç Otomotiv), working in an Agile/Scrum team.
- Led the **zero-downtime, incremental migration of the entire codebase from Next.js 13 (Pages Router) to Next.js 16** — adopting the App Router, React Server Components, Server Actions, streaming/Suspense and Turbopack, and redesigning the data-fetching and caching strategy around it.
- Raised the **Lighthouse performance score from ~20 to 90+** through bundle analysis and code splitting, image/font optimization, third-party script deferral, granular caching (ISR, route-level revalidation) and Core Web Vitals (LCP, CLS, INP) tuning.
- Built and maintain a **1,000+ test suite**: unit/integration tests with **Jest, Vitest and React Testing Library**, and E2E scenarios with **Playwright and Cypress**, wired into the CI/CD pipeline as a merge gate — cutting production regressions substantially.
- Delivered **technical SEO improvements**: structured data (JSON-LD), canonical/meta strategy, SSR-rendered listing and detail pages, sitemap and crawl-budget fixes — improving indexation and organic visibility.
- Set up **observability and product analytics**: error tracking and release health with **Sentry**, performance monitoring with **New Relic**, funnel/behavior analytics and A/B experiments with **PostHog**.
- Contributed to a **micro-frontend / modular architecture** approach and shared component standards documented in **Storybook**.
- Tech: Next.js 13-16, React, TypeScript, Zustand, Tailwind CSS, Jest, Vitest, Playwright, Cypress, Sentry, New Relic, PostHog, GitHub Actions.

Frontend Developer — SHFT

October 2023 – June 2024

- Developed a **B2B proptech platform** used by property and real-estate companies, delivering end-to-end features in an Agile/Scrum process.
- Built **map-based property experiences** with **Mapbox GL**, **Google Maps API** and **Leaflet**: listings rendered on interactive maps, marker clustering, geospatial/area filtering and map-list synchronization.
- Built **real-time modules** (live updates, notifications, messaging) with **Socket.io** and designed the data layer with **GraphQL/Apollo** (queries, mutations, cache normalization) and **Axios**-based REST integrations.
- Implemented complex, data-heavy UI (dashboards, advanced filtering, **multi-step forms with Zod/Yup schema validation**) using **React**, **TypeScript** and **Ant Design**, with client-side routing via **React Router**.
- Designed a **reusable component library and custom React hooks** (data fetching, form, map and permission hooks) documented in **Storybook**, reducing duplicated UI code across the product.
- Wrote unit and E2E tests with **Jest** and **Cypress**; participated in code reviews and PR-based Git workflow.
- Tech: React, TypeScript, React Router, Ant Design, GraphQL, Apollo, Axios, Socket.io, Mapbox GL, Google Maps API, Leaflet, Zod, Yup, Storybook, Jest, Cypress.

Frontend Developer — Nono Company

September 2022 – October 2023

- Shipped **multiple client products end-to-end** in a product agency: SSR web apps with **Next.js**, cross-platform mobile apps with **React Native**, and lightweight interfaces with **Svelte**.
- Handled **deployments and environments on Vercel and AWS**, including preview deployments and CI-based release flow.
- Implemented real-time features with Socket.io and state/data patterns with Redux, React Query and SWR across projects.
- Worked directly with clients and designers to turn requirements and Figma designs into production features.
- Tech: Next.js, React, React Native, Svelte, Redux, React Query, SWR, Socket.io, SCSS, Bootstrap, MUI, Vercel, AWS.

Frontend Developer — Appricot Software Agency

March 2022 – September 2022

- Implemented **pixel-perfect, SEO-compliant interfaces** from UX/UI designs for startup clients as part of end-to-end UX delivery.
- Built reusable, responsive component libraries and enforced accessibility and cross-browser consistency.
- Structured application state with **Redux / Redux Toolkit** and integrated REST APIs with Axios; added real-time behavior with Socket.io where needed.
- Tech: Next.js, React, Redux, Redux Toolkit, Sass, Bootstrap, MUI, Axios, Socket.io.

Frontend Developer — Agesoft (Yeni Nesil E-Ticaret)

March 2021 – March 2022

- Developed and shipped the storefronts of **20+ e-commerce websites** on a multi-tenant e-commerce infrastructure — theming, catalog, cart and checkout flows — and contributed to the **e-commerce admin panel** (store management UI).
- Built and customized **themes and storefront features for IdeaSoft, Ticimax, T-Soft and Shopify** platforms for client stores.
- Implemented **SEO and performance work at scale**: structured data / **JSON-LD schemas** (product, breadcrumb, organization), semantic SEO-friendly markup, image optimization and faster page loads across client sites.
- Integrated frontends with backend services via **REST APIs**; ensured cross-browser compatibility and responsive layouts; standardized recurring UI patterns into reusable templates, reducing delivery time for new client sites.

EDUCATION

Mathematics — Ege University

İzmir, Türkiye

- Coursework in algorithms, data structures, logic and analytical problem solving.

CERTIFICATES

HackerRank — REST API (Intermediate) · HackerRank — JavaScript · HackerRank — React · HackerRank — CSS
